
ANCOVA by round: the outcome on T1, T2, the GPS stamp, the April (04-2) value of the same outcome and region fixed effects. Bars are 95% CIs from district-clustered standard errors (8 clusters, t(7)). The T2 training was held on 29 April 2025. The first feedback report covered the first half of May and was delivered after that round, so at 05-1 T1 is not yet exposed and the first fully exposed round is 06-1.
